Abstract

Ethnopharmacological relevance

Geniposide, the major active constituent of *Fructus Gardeniae* (FG), has been widely used to treat the various diseases in China.

Aim of the study

The chronic toxicity study was conducted to investigate the safety of Geniposide.

Materials and Methods

Sprague-Dawley (SD) rats of both sexes were administered orally Geniposide 25, 50, 100 mg/kg by gavage once daily at volume of 10mL/kg for 26 weeks repeated.
