This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Deviations in Energy Sensing Predict Long-term Weight Change in Overweight Native Americans

Alessio Basolo, Susanne B. Votruba, Sascha Heinitz, Jonathan Krakoff, Paolo Piaggi

Obesity and Diabetes Clinical Research Section, Phoenix Epidemiology and Clinical Research Branch, National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health, Phoenix, AZ.

Last Names: Basolo, Votruba, Heinitz, Krakoff, Piaggi.

Conflict of interest: The authors have nothing to disclose.

Running title: Energy sensing predicts weight change.

Word count: 3956

Number of figures and tables: 4

References: 36

Key Terms: energy expenditure, energy intake, energy sensing, fat intake, food intake, overeating, overfeeding, weight change, weight gain.

Corresponding author: Paolo Piaggi, Ph.D., Obesity and Diabetes Clinical Research Section, Phoenix Epidemiology and Clinical Research Branch, National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health, 4212 N 16th St., Phoenix, AZ 85016. Tel.: +1 (602) 200-5306. Fax: +1 (602) 200-5335.

E-mail: paolo.piaggi@gmail.com, paolo.piaggi@nih.gov

ClinicalTrials.gov identifier: NCT00342732.

Funding: This study was supported by the Intramural Research Program of NIDDK, NIH.
