This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Nationwide, register-based study on 12 993 Danish MS cases
- Spatial variation in MS based on residence at birth, age 15, and onset of disease
- High- / low-risk areas had some variation between birth, age 15, onset of disease
- Small-scale geographical variation may suggest local environmental risk factors
