This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Quantified Degree of Eccentricity of Aortic Valve Calcification Predicts Risk of Paravalvular Regurgitation and Response to Balloon Post-Dilation after Self-Expandable Transcatheter Aortic Valve Replacement
