A 15 year old Male with Refractory Status Epilepticus

Nikita Malani Shukla* and Sarah Risen*

*Department of Pediatric Neurology, Baylor College of Medicine, Houston, TX

Key Words: Status epilepticus, Hashimoto's encephalopathy

Abstract:

In this case report, we discuss a 15 year old previously healthy male who presented with acute onset encephalopathy with refractory status epilepticus requiring pentobarbital-induced burst suppression for seizure control. We review the differential diagnosis and important diagnostic considerations for pediatric patients presenting with acute encephalopathy. We then review Hashimoto's Encephalopathy (SREAT) and discuss presentation, diagnosis, and treatment.
