A considerable amount of literature has been published on optimal management of patients who have allergy and/or asthma related diseases. While major progress has been reported with new and exciting pharmacological therapies which include biologically derived agents, this does not replace the need for an effective patient-provider interpersonal relationship [1]. Aside from our expertise derived from state-of-the art education (both in graduate medical education and continuing medical education) and clinical experience, there is more to optimal management of our patients' health besides the right prescription at the right time. Indeed, the clinical allergy immunology community has been a pioneer in the importance and value of managing the whole patient – not just their specific disease [2].

It is with this background in mind that I call your attention to what might, at first glance, seem like a diverse group of articles in this month's issue of the *Annals of Allergy, Asthma and Immunology*. However, taken together these articles provide broad and inclusive discussions
