Title: *Plasmodium falciparum* merozoite protein-1 genetic diversity and multiplicity of infection in isolates from Congolese children consulting in a pediatric hospital in Brazzaville

Authors: Nerly Shirère Gampio Gueye, Francine Ntoumi, Christevy Vouvongui, Simon Charles Kobawila, Michael N. Kombo, Alain Mouanga, Julia Deibert, Felix Koukouikila-Koussounda

PII: S0001-706X(17)31031-8
DOI: <https://doi.org/10.1016/j.actatropica.2018.04.012>
Reference: ACTROP 4639

To appear in: *Acta Tropica*

Received date: 26-8-2017
Revised date: 1-4-2018
Accepted date: 3-4-2018

Please cite this article as: Gueye, Nerly Shirère Gampio, Ntoumi, Francine, Vouvongui, Christevy, Kobawila, Simon Charles, Kombo, Michael N., Mouanga, Alain, Deibert, Julia, Koukouikila-Koussounda, Felix, *Plasmodium falciparum* merozoite protein-1 genetic diversity and multiplicity of infection in isolates from Congolese children consulting in a pediatric hospital in Brazzaville. *Acta Tropica* <https://doi.org/10.1016/j.actatropica.2018.04.012>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Impact of artemisinin-combination therapies on malaria parasites in isolates from children in Congo
- Reduction of multiplicity of infection
- No influence on genetic diversity of merozoite surface protein-1
- Importance of sub-microscopic infection
