²University of South Florida, Department of Infectious Disease

Article type: Case Report

Corresponding Author:

Abu-Sayeef Mirza 17 Davis Blvd, Suite 308 Tampa, FL 33606

Manuscript word count: 1161

Abstract word count: 172

Highlights

- Tumor necrosis factor (TNF) inhibitors are associated with risks of invasive infections
- Disseminated histoplasmosis can be easily mistaken for a pneumonia
- Confounding comorbidities and travel-associated risk factors may delay diagnoses
- Liposomal amphotericin b, may or may not have altered the course of this patient's illness
