This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- No reciprocal associations between maternal depression and infant sleep problems.
- Antidepressant exposure not associated with increased infant sleep problems.
- Maternal depression not associated with increased infant sleep problems.
- Reciprocal longitudinal effects between maternal cognitions and infant waking.
- Early maternal cognitions and infant waking predicted later night settling behaviours.
