This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- PMS patients exhibited reduced cortical thickness in the MPFC, OFC and insula.
- PMS group had increased subcortical volumes of the amygdala, thalamus and pallidum.
- The ACC and precuneus negatively correlated with the DRSP score in PMS patients.
