This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Effortful control explains both depressive and anxiety symptoms in adult individuals
- Impaired executive attention is related to more depressive symptoms
- Remitted depressed individuals do not show a riskier temperamental profile
