Title: Docosahexaenoic acid improves motor function in the model of spinal cord injury

Authors: Igor Manzhulo, Anna Tyrtysnaia, Yuliya Kipryushina, Inessa Dyuizen, Ekaterina Ermolenko, Olga Manzhulo

PII: S0304-3940(18)30104-6
DOI: <https://doi.org/10.1016/j.neulet.2018.02.028>
Reference: NSL 33420

To appear in: *Neuroscience Letters*

Received date: 7-12-2017
Revised date: 31-1-2018
Accepted date: 13-2-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Docosahexaenoic acid improves motor function in the model of spinal cord injury

Graphical abstract

Highlights

- DHA leads to recovery of motor functions in SCI.
- DHA cause enhancement of remyelination, proliferative and antioxidant activity.
- DHA leads to astrocytosis and increased expression of vimentin after SCI.
- Increased expression of vimentin can play a key role in motor function recovery in SCI.
