

## Accepted Manuscript

Transcription factor target site search and gene regulation in a background of unspecific binding sites

J. Hettich , J.C.M. Gebhardt

PII: S0022-5193(18)30284-4  
DOI: [10.1016/j.jtbi.2018.05.037](https://doi.org/10.1016/j.jtbi.2018.05.037)  
Reference: YJTBI 9493

To appear in: *Journal of Theoretical Biology*

Received date: 12 March 2018  
Revised date: 29 May 2018  
Accepted date: 30 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Transcription factor target site search time calculated using dissociation rates
- Transcription factors are optimized for fast target site search
- Transcription factors are not optimized for high target site occupation
- Dimerization in solution outperforms dimerization on DNA in gene activation
