A New Moving Strategy for the Sequential Monte Carlo Approach in Optimizing the Hydrological Model Parameters

Gaofeng Zhu , Xin Li , Jinzhu Ma , Yunquan Wang , Shaomin Liu , Chunlin Huang , Kun Zhang , Xiaoli Hu

PII: S0309-1708(17)30015-5
DOI: [10.1016/j.advwatres.2018.02.007](https://doi.org/10.1016/j.advwatres.2018.02.007)
Reference: ADWR 3093

To appear in: *Advances in Water Resources*

Received date: 6 January 2017
Revised date: 6 February 2018
Accepted date: 7 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new SMC sampler incorporating the genetic, evaluation and Metropolis-Hasting algorithms into the framework of SMC was developed
- The new SMC sampler is well suited to handle unknown static parameters of hydrologic models
- The new SMC sampler has good abilities in mixing and maintaining particle diversity
