## Highlights

New seismic data on the Labrador rifted margin show distinct structural domains. Zones of hyper-extended crust, exhumed mantle and oceanic crust are described. Comparisons made with west Greenland and Iberia-Newfoundland magma-poor margins.

## Keywords

rifted margins  
magma-poor  
extension history  
tectonics  
Labrador

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.
