**HIGHLIGHTS**

- Laryngeal chondrosarcoma is an uncommon tumor and therefore, there is no established diagnostic and treatment approach for this tumor
- 90% of laryngeal chondrosarcoma are low-grade tumors and therefore conservative surgery is recommended as initial treatment
- Percutaneous biopsy could select which patients could be candidates for a less radical treatment instead of total laryngectomy

**KEY LEARNING POINTS**

1. The laryngeal chondrosarcoma is a very rare neoplasm
2. Surgery is the only curative treatment for this tumor
3. Unlike the epidermoid carcinoma, due to its pattern of dissemination and the survival rate, this tumors can be treated with a less invasive surgery trying to
