This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We examine the links between a firm's internationalization status and imperfections in product and labor markets.
- We develop a framework for modelling heterogeneity across firms in terms of product market power, labor market imperfections and TFP.
- We use an unbalanced panel of 7,458 manufacturing firms over the period 1994-2012 in Japan.
- Engagement in international activities matters for determining the type as well as the degree of imperfections.
- We find clear differences in behavior between firms that serve the foreign market either through exporting or through FDI.
