

## Accepted Manuscript

Title: Possible Mechanisms Mediating Apoptosis of Bronchial Epithelial Cells in Chronic Obstructive Pulmonary Disease – A Next-Generation Sequencing Approach

Authors: Ming-Ju Tsai, Wei-An Chang, Shu-Fang Jian, Kuo-Feng Chang, Chau-Chyun Sheu, Po-Lin Kuo

PII: S0344-0338(18)30713-1  
DOI: <https://doi.org/10.1016/j.prp.2018.08.002>  
Reference: PRP 52145

To appear in:

Received date: 10-6-2018  
Revised date: 24-7-2018  
Accepted date: 6-8-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Possible Mechanisms Mediating Apoptosis of Bronchial Epithelial Cells in Chronic Obstructive Pulmonary Disease – A Next-Generation Sequencing Approach

### Highlights:

- Dysregulated genes of PI3K-Akt pathway were found in COPD bronchial epithelial cells.
- Dysregulated *TLR4*, *IL6*, *F2R*, *FGFR3*, and *FGFR1* might contribute to apoptosis.
- Dysregulated *IL6*, *F2R*, and *FGFR3* might contribute to cell proliferation inhibition.
- *FGFR1* might be suppressed by miR-195-5p, miR-424-5p, and miR-6724-5p.
