This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Determining Performance Metrics for Targeted Next-Generation Sequencing Panels Using Reference****Materials**

Megan H. Cleveland,\* Justin M. Zook,\* Marc Salit,\*† and Peter M. Vallone\*

From the Material Measurement Laboratory, \* National Institute of Standards and Technology, Gaithersburg, Maryland; and the Joint Initiative for Metrology in Biology,† Stanford, California,

**Running Head:** Using NIST RMs for NGS panel metrics

**Funding:** Supported by internal Funding, National Institute of Standards and Technology, U.S. Department of Commerce.

**Disclosures:** Certain commercial equipment, instruments, and materials are identified to specify experimental procedures as completely as possible. In no case does such identification imply a recommendation or it imply that any of the materials, instruments, or equipment identified are necessarily the best available for the purpose. Information presented does not necessarily represent the official position of the National Institute of Standards and Technology.

All work presented has been reviewed and approved by the National Institute of Standards and Technology Human Subjects Protections Office.

**Corresponding Author:**

Megan H. Cleveland,
