This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Copper oxide nanowires for efficient photoelectrochemical water splitting

Graphical Abstract

Highlights.

- One-dimensional CuO nanowires were well fabricated on Cu foils via a facile thermal-treatment process for PEC water splitting.
