This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We propose an exact method for the location-routing problem with pickup and delivery.
- We implement a solution method based on column generation and Branch and Price.
- We solve the subproblem using an elementary shortest path procedure.
- We rely on a four-level branching scheme to account for various decisions.
- We analyze thoroughly the impact of fixed costs for depots and routes on solutions.
