Do safety engineered devices reduce needle-stick injuries?

J. Schuurmans, S.P. Lutgens, L. Groen, P.M. Schneeberger

PII: S0195-6701(18)30264-0

DOI: [10.1016/j.jhin.2018.04.026](https://doi.org/10.1016/j.jhin.2018.04.026)

Reference: YJHIN 5424

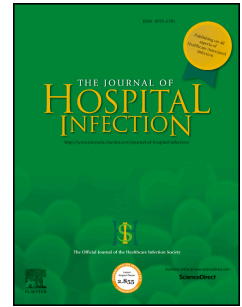

To appear in: *Journal of Hospital Infection*

Received Date: 17 April 2018

Accepted Date: 29 April 2018

Please cite this article as: Schuurmans J, Lutgens SP, Groen L, Schneeberger PM, Do safety engineered devices reduce needle-stick injuries?, *Journal of Hospital Infection* (2018), doi: 10.1016/j.jhin.2018.04.026.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Do safety engineered devices reduce needle-stick injuries?

J. Schuurmans, S.P. Lutgens, L. Groen, P.M. Schneeberger.

Department of Medical Microbiology and Infection Control, Jeroen Bosch Hospital, 's-Hertogenbosch, the Netherlands.
