Title: Hydraulic anatomy affects genotypic variation in plant water use and shows differential organ specific plasticity to drought in *Sorghum bicolor*

Authors: A. Guha, S.S. Chhajed, S. Choudhary, R. Sunny, S. Jansen, D. Barua

PII: S0098-8472(18)31005-0
DOI: <https://doi.org/10.1016/j.envexpbot.2018.08.025>
Reference: EEB 3551

To appear in: *Environmental and Experimental Botany*

Received date: 3-7-2018
Revised date: 19-8-2018
Accepted date: 19-8-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ORIGINAL FULL PAPER

**Hydraulic anatomy affects genotypic variation in plant water use
and shows differential organ specific plasticity to drought in
*Sorghum bicolor***

The United States Government retains and the publisher, by accepting the article for publication, acknowledges that the United States Government retains a non-exclusive, paid-up, irrevocable, world-wide license to publish or reproduce the published form of this manuscript, or allow others to do so, for United States Government purposes. The Department of Energy will provide public access to these results of federally sponsored research in accordance with the DOE Public Access Plan (<http://energy.gov/downloads/doe-public-access-plan>).

Highlights:

- Clear linkage was observed between hydraulics and leaf gas exchange traits
- Genotypes showed safety-efficiency trade-offs in hydraulic traits
