The impact of persistent dynamics on suspended sediment load estimation

Andrew B. Gray

PII: S0169-555X(18)30355-6
DOI: doi:[10.1016/j.geomorph.2018.09.001](https://doi.org/10.1016/j.geomorph.2018.09.001)
Reference: GEOMOR 6510
To appear in: *Geomorphology*
Received date: 10 March 2018
Revised date: 1 September 2018
Accepted date: 2 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The impact of persistent dynamics on suspended sediment load estimation

Andrew B. Gray

University of California, Riverside, 900 University Avenue, Riverside, CA 92521, USA

Tel.: +1 951-827-6159; E-mail: agray@ucr.edu

Keywords: suspended sediment; sediment load; US Pacific Coast; temporal dependence; persistence; small mountainous rivers; Christmas Flood of 1964
