This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical Abstract

A targeted antitumor drug delivery system based on the nanocomposite of UiO-66 embedded with bioactive Ag NCs by using AS1411 aptamer as the template (denoted by UiO-66@AgNCs@Apt@DOX) was prepared in a modified one-pot reaction and can be applied as a promising targeted drug delivery platform for cancer therapy
