This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Methodology and trends for an intelligent transport system in developing countries

Highlights

1. Firstly, the problems of the implementation of intelligent transport systems in developing countries like sub-Saharan Africa.
2. Secondly, we present a survey of a road traffic model and an urban transport network models.
3. Finally, we propose solutions, which provide methodologies for the modeling of a system and monitor traffic on inter-urban road transport networks in developing countries.
