Title: Adjustment of the lysosomal-mitochondrial axis for control of cellular senescence

Authors: Joon Tae Park, Young-Sam Lee, Kyung A. Cho, Sang Chul Park

PII: S1568-1637(18)30168-5
DOI: <https://doi.org/10.1016/j.arr.2018.08.003>
Reference: ARR 851

To appear in: *Ageing Research Reviews*

Received date: 11-7-2018
Revised date: 10-8-2018
Accepted date: 18-8-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Adjustment of the lysosomal-mitochondrial axis for control of cellular senescence

Running Title: Lysosomal-mitochondrial axis function in aging

Joon Tae Park¹, Young-Sam Lee^{2,3}, Kyung A Cho⁴, Sang Chul Park^{2,5}

Highlights

- Lysosomes and mitochondria create a central hub in process of cellular senescence
- Crosstalk between them suggests the existence of lysosomal-mitochondrial axis
- Modulation of this axis represents a potent strategy for senescence alleviation
