Accepted Manuscript

Title: Predictive modelling of supercritical CO₂ dewatering of capillary tubes

Authors: Hamish Pearson, Bernard Dawson, Mark Kimberley, Bruce Davy

PII: S0896-8446(18)30249-3

DOI: https://doi.org/10.1016/j.supflu.2018.08.016

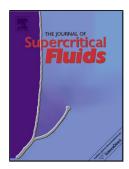

Reference: SUPFLU 4359

To appear in: J. of Supercritical Fluids

Received date: 18-4-2018 Revised date: 6-8-2018 Accepted date: 25-8-2018

Graphical abstract

Highlights

- Supercritical CO₂ can be used to dewater porous materials.
- Fluid dynamics modelling has been used to describe the process in linear capillaries.
- Taylor bubbles form in capillaries with a Bond number less than unity.
- An experimentally derived dispersion coefficient is required for accurate modelling.
