This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Can self-assessed risk attitudes predict behavior under risk? Evidence from a
field study in China**

Highlights

- This paper tests the predict power of self-assessed risk attitudes for choices in a risk experiment.
- The analysis is based on a field study with more than 200 non-student subjects.
- Results show that the correlation between self-assessed risk attitudes and experimental choices is low and insignificant.
