This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

1. This paper studies how greater school access affects men's fertility decisions
2. The analysis is based on a series of educational reforms in Mali in 1992
3. Increased school access for boys led to large subsequent decreases in fertility
4. Effects were driven by delayed marriage entry and urbanization
