

Accepted Manuscript

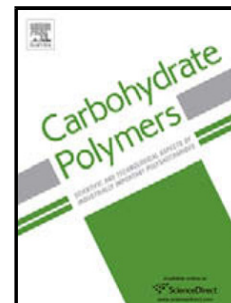

Title: Highly Stretchable and Transparent Films Based on Cellulose

Authors: David Boon Kiang Lim, Hao Gong

PII: S0144-8617(18)30989-5

DOI: <https://doi.org/10.1016/j.carbpol.2018.08.080>

Reference: CARP 13977

To appear in:

Received date: 3-5-2018

Revised date: 10-8-2018

Accepted date: 19-8-2018

Please cite this article as: Kiang Lim DB, Gong H, Highly Stretchable and Transparent Films Based on Cellulose, *Carbohydrate Polymers* (2018), <https://doi.org/10.1016/j.carbpol.2018.08.080>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highly Stretchable and Transparent Films Based on Cellulose

Graphical abstract

Highlights

- Additives made the cellulose film more transparent
- Highly stretchable film was achieved
- Film remains amorphous after the addition of crystalline additives
- Glass transition temperature decreases after the addition of additives
