This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Early childhood adversities are linked with PD symptoms in adulthood
- Malnutrition is linked with paranoid, schizoid, avoidant, and dependent PDs
- Maltreatment is linked with paranoid, schizoid, avoidant, and schizotypal PDs
- Overall, those exposed to both adversities had even higher PD scores
- Interventions should focus on immediate and long-term outcomes
