This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

The Patient Health Questionnaire-9 (PHQ-9) was tested in a Colombian sample.

The study evaluated whether the test responds to a one- or two-factor structure.

The PHQ-9 demonstrates good psychometric behavior.

There is evidence that points to the PHQ-9 being composed of two factors.
