This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Both inattentiveness (IN) and hyperactivity/impulsivity (HI) dimensions of ADHD were related with the severity of IA symptoms
- Presence of probable ADHD was related with the severity of IA symptoms
- Particularly non-accept dimension of the Difficulties in Emotion Regulation Scale predicted IA
- ADHD was related with IA even after controlling difficulties in emotion regulation, anxiety, depression and neuroticism
