This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- This paper reported the association between dietary patterns and cognitive function in a middle and elderly Chinese population.
- The Western-style pattern is associated with an increased risk of cognitive impairment.
- The grains-fruits-vegetables pattern is associated with a reduced risk of cognitive impairment.
- Our findings provide a comprehensive understanding of the role of dietary patterns in the prevention of cognitive function
