This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Hypervigilant scanning behavior in participants with Social Anxiety Disorder (SAD).
- Analyses based on scanpath length and fixation counts regarding social stimuli.
- Participants with SAD showed signs of overall hypervigilance under conditions of threat.
- Social anxiety was not associated with hypervigilance while searching for threat stimuli.
