Mechanism of velocity enhancement of asymmetrically two lines initiated warhead

Yuan Li , Shihui Xiong , Xiaogang Li , Yuquan Wen

PII: S0734-743X(18)30551-7
DOI: [10.1016/j.ijimpeng.2018.07.011](https://doi.org/10.1016/j.ijimpeng.2018.07.011)
Reference: IE 3135

To appear in: *International Journal of Impact Engineering*

Received date: 1 June 2018
Revised date: 8 July 2018
Accepted date: 14 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Applicability of the different EOS in modeling Mach reflection is verified.
- Aiming fragment velocity goes up and down along with the initiators' central angles.
- Fragment velocity is the mutual results of detonation distance and the Mach pressure.
- New formula for fragment velocity in the aiming direction is established.
