This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Fisher information and quantum Fisher information of estimation on Hubble parameter of de Sitter space are investigated.
- Quantum Fisher information degrades due to Gibbons-Hawking radiation
- Quantum Fisher information can be enhanced for proper coupling of scalar field to curvature.
- Optimal quantum Fisher information is dependent on the choice of de Sitter α -vacua due to their squeezed nature.
