

## Accepted Manuscript

Structure and function of the histone chaperone FACT –  
Resolving FACTual issues

Katerina Gurova, Han-Wen Chang, Maria E. Valieva, Poorva Sandlesh, Vasily M. Studitsky

PII: S1874-9399(18)30159-7  
DOI: doi:[10.1016/j.bbagrm.2018.07.008](https://doi.org/10.1016/j.bbagrm.2018.07.008)  
Reference: BBAGRM 94291

To appear in: *BBA - Gene Regulatory Mechanisms*

Received date: 16 April 2018  
Revised date: 17 July 2018  
Accepted date: 19 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Structure and function of the histone chaperone FACT – resolving FACTual issues**

**Highlights**

The best-established FACT function is nucleosome maintenance during transcription.

The role of FACT in facilitating transcription through chromatin in vivo requires further evaluation.

Aggressive tumors are more sensitive to FACT depletion than normal tissues.

The elevated requirement for FACT in tumor cells is associated with increased sensitivity to chromatin destabilization.
