

# Accepted Manuscript

High frequency stimulation-induced plasticity in the prelimbic cortex of rats emerges during adolescent development and is associated with an increase in dopamine receptor function

Shuo Kang, Charles L. Cox, Joshua M. Gulley

PII: S0028-3908(18)30587-2  
DOI: 10.1016/j.neuropharm.2018.08.037  
Reference: NP 7322  
To appear in: *Neuropharmacology*  
Received Date: 09 June 2018  
Accepted Date: 26 August 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**High frequency stimulation-induced plasticity in the prelimbic cortex of rats emerges during adolescent development and is associated with an increase in dopamine receptor function**
