Interplay between reaction and diffusion processes in governing the dynamics of virus infections

G. Bocharov, A. Meyerhans, N. Bessonov, S. Trofimchuk, V. Volpert

PII: S0022-5193(18)30416-8  
DOI: <https://doi.org/10.1016/j.jtbi.2018.08.036>  
Reference: YJTBI 9601

To appear in: *Journal of Theoretical Biology*

Received date: 26 October 2017  
Revised date: 22 August 2018  
Accepted date: 28 August 2018

Please cite this article as: G. Bocharov, A. Meyerhans, N. Bessonov, S. Trofimchuk, V. Volpert, Interplay between reaction and diffusion processes in governing the dynamics of virus infections, *Journal of Theoretical Biology* (2018), doi: <https://doi.org/10.1016/j.jtbi.2018.08.036>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A delay reaction-diffusion model describes the virus infection dynamics in tissue
- The infection dose, delays and diffusion rates determine the infection fate
- Infection can be eliminated or persist in a spatially uniform or oscillatory mode
- Slow immune cell motility results in immune cell exhaustion
