This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Glucocorticoid interactions with the dorsal striatal endocannabinoid system in regulating inhibitory avoidance memory

### Highlights

- The endocannabinoid (eCB) system mediates rapid glucocorticoid effects on memory.
- We examined interactions between glucocorticoids and the eCB system in the striatum.
- Striatal CB1 receptors are involved in memory formation of inhibitory avoidance.
- Glucocorticoids recruit striatal eCB signaling to enhance memory consolidation.
