Title: Passive samplers in sewers and rivers with highly fluctuating micropollutant concentrations – better than we thought

Authors: Lena Mutzner, Etienne L.M. Vermeirssen, Christoph Ort

PII: S0304-3894(18)30570-3
DOI: <https://doi.org/10.1016/j.jhazmat.2018.07.040>
Reference: HAZMAT 19549

To appear in: *Journal of Hazardous Materials*

Received date: 22-3-2018
Revised date: 29-6-2018
Accepted date: 9-7-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Passive samplers in sewers and rivers with highly fluctuating micropollutant concentrations – better than we thought

Graphical abstract

Highlights

- Measured and modelled concentration profiles systematically evaluated
- Variable concentrations do not explain observed deviations from true concentrations
- Longer passive sampling periods or early/late peak lead to higher uncertainty
- Event-based passive sampling in sewers comparable to sampling <10min
