This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

1. Topological reorganization of EEG functional network in AD patients is observed.
2. AD significantly affects the nodal CC of the frontal and central-parietal regions.
3. The alteration in EEG network might represent a marker of cognitive decline in AD.
