To appear in: *Physica A*

Received date: 31 May 2017

Revised date: 24 January 2018

Please cite this article as: A. Chakraborty, et al., Characterization of the community structure in a large-scale production network in Japan, *Physica A* (2018), <https://doi.org/10.1016/j.physa.2018.08.175>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

*Highlights (for review)

Highlights:

- The community structure is uncovered in a large-scale directed production network.
- We conduct a detailed topological characterization of the communities.
- A heterogeneous distribution of inter-modular link weights is observed.
- Significant over-expressions of prefectures and sectors is detected across communities.
