This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## HIGHLIGHTS

1. We make further exploration of discrete particle swarm optimization (DPSO) for influence maximization
2. A network topology-based local search strategy is proposed to enhance the local exploitation of DPSO
3. Our algorithm outperforms conventional centrality-based heuristics and achieves comparable results to greedy algorithm.
4. The proposed algorithm can provide steady performance on the identification of influential nodes.
