

Accepted Manuscript

Current trends, challenges, and perspectives of anti-fogging technology: Surface and material design, fabrication strategies, and beyond

Iván Rodríguez Durán, Gaétan Laroche

PII: S0079-6425(18)30090-2
DOI: <https://doi.org/10.1016/j.pmatsci.2018.09.001>
Reference: JPMS 530

To appear in: *Progress in Materials Science*

Received Date: 21 June 2017
Revised Date: 28 August 2018
Accepted Date: 3 September 2018

Please cite this article as: Durán, I.R., Laroche, G., Current trends, challenges, and perspectives of anti-fogging technology: Surface and material design, fabrication strategies, and beyond, *Progress in Materials Science* (2018), doi: <https://doi.org/10.1016/j.pmatsci.2018.09.001>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Contents

1	Introduction	2
1.1	Context.....	2
1.2	Scope of this review.....	4
2	Theoretical aspects of fogging formation	4
3	Basics of wettability	8
3.1	Interfacial tensions between solids, liquids, and gases.....	8
3.2	Surface wetting theories.....	9
3.2.1	Smooth surfaces: Young model and the static contact angle.....	9
3.2.2	Wenzel model.....	11
3.2.3	Cassie–Baxter model.....	11
3.2.4	Marmur model.....	12
3.3	Dynamic wettability: Contact angle hysteresis and sliding angles.....	13
3.4	Defining hydrophobic, superhydrophobic, hydrophilic, and superhydrophilic anti-fogging surfaces.....	15
4	Effects of fogging: When light meets fog drops	16
5	Anti-fogging strategies and related materials	19
5.1	Changes in the environmental parameters.....	19
5.2	Changes in the affinity between the solid surface and the fog drops.....	20
5.2.1	Coating deposition.....	21
5.2.1.1	Organic coatings.....	21
5.2.1.1.1	Natural water-soluble polymers, NWSPs.....	22
5.2.1.1.2	Synthetic water-soluble polymers, SWSPs.....	27
5.2.1.2	Inorganic coatings.....	40
5.2.1.2.1	SiO ₂ -based anti-fogging coatings.....	42
5.2.1.2.2	TiO ₂ -based anti-fogging coatings.....	60
5.2.1.2.3	ZnO-based anti-fogging coatings.....	74
5.2.1.2.4	Carbon-based anti-fogging coatings.....	76
5.2.1.2.5	Other materials.....	77
5.2.1.3	Organic-inorganic coatings.....	79
5.2.1.3.1	Inorganic component within the polymeric matrix.....	79
5.2.1.3.2	Inorganic component at the polymeric matrix/substrate interface.....	84
5.2.1.3.3	Inorganic component on the polymeric matrix.....	85
5.2.2	Surface chemistry modification.....	86
5.2.3	Surface physical modification.....	92
6	Progress in anti-fogging technology	95
6.1	Anti-bacterial/Anti-fogging surfaces.....	95
6.2	Self-cleaning/Anti-fogging surfaces.....	98
6.3	Self-healing/Anti-fogging surfaces.....	104
7	Anti-fogging technology applications: Common fogging problems and proposed solutions	106
7.1	Architectural windows, mirrors, and vehicle windshields.....	106
7.2	Photovoltaic modules (solar cells).....	108
7.3	Eyeglasses, swimming goggles, and protective eyewear.....	108
7.4	Food industry: Food packaging and greenhouses.....	109
7.5	Medicine: Endoscopic surgery.....	110
7.6	Other applications.....	111
8	Concluding remarks and outlook	112
	Acknowledgements	115
	References	115
