This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Increased use of thoracic radiotherapy in ES-SCLC following CREST trial.
- Trial schedule of 30 Gy in 10 for thoracic radiotherapy has been widely adopted.
- High consistency in the use of prophylactic cranial irradiation.
