This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Indoor whole-comfort yearly experimental test is performed in a working environment
- Multiphysics/multidomain variables are investigated within a 1000-employee sample
- Employees are consistently positively influenced by triggers to improve working quality
- Non-physical triggers are further options to save energy without compromising comfort
