Modelling and Analysis of Temporal Preference Drifts Using A  
Component-Based Factorised Latent Approach

F. Zafari, I. Moser, T. Baarslag

PII: S0957-4174(18)30581-5  
DOI: <https://doi.org/10.1016/j.eswa.2018.09.010>  
Reference: ESWA 12198

To appear in: *Expert Systems With Applications*

Received date: 18 March 2018  
Revised date: 4 September 2018  
Accepted date: 5 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- New method for modelling dynamic preferences and constituting aspects is proposed.
- Extends CTFVSVD, in which socially-influenced preference aspects were modelled.
- Enables us to analyse the temporal behaviour of aspects in different datasets.
- Extensive experiments and statistical analysis are carried out.
- Our method achieves statistically significant improvements over state of the art.
